Basaam Qasem

Full Stack Developer

Computer Science student at the University of West London with experience building full-stack web applications using React, Node.js, PHP, and MySQL. Currently developing an AI-powered language learning application and exploring machine learning with PyTorch and TensorFlow. Seeking an entry-level software developer role.

Professional Experience

Web Developer Intern – Dovelp Limited, Luton (2021–2022)

- Built full-stack applications using MongoDB, Express.js, React, and Node.js
- Developed websites, fixed bugs, and improved UI/UX
- Used Git for version control and collaboration
- Worked both independently and within a development team

IT Technician – CMC Birmingham (2018–2020)

- Installed and maintained IT systems
- Troubleshoot and resolved technical issues
- Performed updates and hardware maintenance

Computer Tutor – Self Employed (2022–Present)

- Taught students basic programming in English and Arabic
- Prepared students for entry-level programming and web development roles
- Used AI tools to enhance learning and simulations

Projects

Language Learning Application

<https://basaamqpro.github.io/lingo-rooms/>

- Developed a multi language translation web application
- integrating Google Translate API. with persistent chat rooms, localStorage session saving, transliteration support, dynamic DOM rendering, and editable conversation history.

Fitness app diagram

<https://basaamqpro.github.io/muscle-map-workout/>

- Built a mobile-first fitness web app using HTML, CSS, JavaScript, and SVG overlays, allowing users to select muscle groups from a body diagram, filter workouts by equipment type, and launch embedded YouTube exercise videos.
